

ROHIT GHAWALE

Backend Lead | Distributed and HighPerf Systems | Rust • Python • Go • Java

Nagpur, India • code.to.polymath@gmail.com • +91-8459188977 • [github](#) • [linkedin](#)

SUMMARY

Polyglot engineer specializing in high-throughput distributed systems (150K TPS, sub-ms latency). Led mission-critical Python→Rust migration reducing infrastructure costs 40% while maintaining 99.9% SLA across 20-server clusters. Expert in telecom platforms, event-driven architectures, and performance optimization at scale. One page can't cover everything - lets connect if you want to explore what more i bring to the table.

TECHNICAL SKILLS

Expert: Python (FastAPI, Django) • Rust (Axum, Tokio) • Docker Swarm • PostgreSQL • Redis/Dragonfly

Proficient: Go • JavaScript/React • Kafka • ClickHouse • MongoDB • HAProxy • Prometheus/Grafana

Cloud & DevOps: AWS (EC2, S3, RDS, Lambda) • GCP • GitLab CI/CD • Ansible • Terraform • k6 Load Testing

Domains: Telecom (SMS/SMPP) • Blockchain (Cosmos SDK, MEV) • AI/ML (LangChain, Vector DBs)

PROFESSIONAL EXPERIENCE

Software Engineer

Pinnacle Teleservices | Nagpur, India | Jul 2023 – Present

- **Achieved 150K TPS (tested)** on GoFlipo SMS/OTP platform serving 10M+ daily transactions with 99.9% uptime—led Rust migration from Python reducing response latency from 50ms to <5ms while cutting infrastructure costs 40%
- **Architected microservices** (central-hub, dlr-gen) using Axum/Tokio deployed across 20 servers via Ansible with zero-downtime deployments and automated rollback; implemented event-driven architecture with Kafka processing 500K DLRs/hour
- **Led 8-member cross-functional team** coordinating in-house and vendor developers; served as SPOC for telecom operators, aggregators, and enterprise clients ensuring SLA compliance
- **Optimized database performance** across PostgreSQL (20-pool), ClickHouse (1000-batch writes), and DragonflyDB (200-pool) reducing query latency 70% and enabling real-time analytics on 1B+ records
- **Built observability stack** with Prometheus + Grafana monitoring 50+ metrics across distributed infrastructure; created custom k6 load testing framework validating 100K+ concurrent requests
- **Designed network architecture** with HAProxy (round-robin LB), Fortigate 600-F firewall, and BBR congestion control achieving <2ms internal latency between services

Software Developer

SimplicityLabs | Gurgaon, India | Jul 2022 – Jul 2023

- **Delivered TRAI-approved fraud prevention system** (Verifier.Official) processing 50K+ verifications daily with 99.99% uptime using Django REST APIs, React dashboards, and real-time threat detection
- **Built decentralized file-sharing platform** (DOCUR) using FastAPI + IPFS with chunked uploads reducing storage costs 80%; implemented MongoDB full-text search indexing 500K+ documents
- **Developed AI/ML integrations** using LangChain + Pinecone for document Q&A; reduced inference costs 60% via intelligent caching strategies

KEY PROJECTS & CONTRIBUTIONS

Rust Migration Framework | Open-source patterns for FastAPI→Axum migration including async I/O, error handling, and DB pooling best practices

LazyVim Config | Advanced Neovim setup optimized for polyglot development (Rust/Python/Go/JS) with LSP, debugging, and Git integration

MEV Arbitrage Bots | Cosmos SDK-based trading systems for DEX arbitrage; built backtesting framework achieving 15% paper-trading returns

EDUCATION

B.Tech, Chemical Engineering | CGPA 7.0

College of Engineering & Technology, Akola | 2017 – 2022
